Alerting Abstract WO A2

NOVELTY - Method consists in calculating a financial risk associated with a first financial instrument based on a pricing volatility model, generating an order to hedge the instrument by acquiring a second at a target price from a short or long position and transmitting the order to an exchange. A second order is generated to hedge by selling the second instrument at a higher price than the current bid price, with the buy and sell orders made simultaneously pending. The order for the second instrument acquisition is automatically generated in response to a change in the pricing volatility model.

DESCRIPTION - There is an INDEPENDENT CLAIM for a financial instrument trading system.

USE - Method is for an equity options trading desk of a financial institution.

ADVANTAGE - Method enables automated hedging of financial instruments.

Projected data generating and testing method for financial application, involves processing projected test data using specific formula in order to derive processed data equal to portion of input test data

Patent Assignee: PILIPOVIC D N (PILI-I)

Inventor: PILIPOVIC D N

Patent Family (1 patents, 1 countries)

Patent Number	Kind	Date	Application Number	Kind	Date	Update	Type
US 6456982	B1	20020924	US 199386002	A	19930701	200303	B

Alerting Abstract US B1

NOVELTY - A test market input data including liquid financial product market price, is preprocessed to calculate the respective market projection test data. The projected test data is then processed using a specific formula in order to derive final market projection data equal to portion of the input test data.

DESCRIPTION - INDEPENDENT CLAIMS are included for the following:

1. Data processing apparatus; and
2. Data processing method.

USE - For data processing system and in computerized system for simulating, pricing and hedging financial products.

ADVANTAGE - The current market price is used as input and efficiently converges it with expected price. The dynamic variations in market price is effectively used.

			US 2004959528	A	20041006		

Alerting Abstract US A1

NOVELTY - Weighted prices of out-of-the money and call options are averaged based on financial instrument such as bond, security e.g. stock, or stock index, using prescribed formula in which the time to expiration is calculated in minutes.

DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

3. derivative contract;
4. derivative contract creating method; and
5. derivative contract settling method.

USE - For estimating expected volatility in financial market.

ADVANTAGE - Ensures precise and robust **estimation** of expected **volatility** in **financial markets**. Enables **risk managers**, **hedge funds** and **market makers** to efficiently trade **volatility** and **hedge** volatility trades with listed options.

English Abstract:

Methods and systems for engaging in enhanced parimutuel wagering and gaming. In one embodiment, different types of bets can be offered and processed in the same betting pool on an underlying event, such as a horse or dog race, a sporting event or a lottery, and the premiums and payouts of these different types of bets can be determined in the same betting pool, by configuring an equivalent combination of fundamental bets for each type of bet, and performing a demand-based valuation of each of the fundamental bets in the equivalent combination. In another embodiment, bettors can place bets in the betting pool with limit odds on the selected outcome of the underlying event. The bets with limit odds are not filled in whole or in part, unless the final odds on the selected outcome of the underlying event are equal to or greater than the limit odds.

Priorities	US	2002115505		20020402

English Abstract:

A system and method for replicating derivatives strategies and for trading derivatives strategies in a demand based trading market is provided. The system and method include a plurality of client devices (160) to (200) for establishing communications to a central controller (100). The central controller (100) includes an application server (210) responsible for processing requests for services and for routing the requests for services to other software and hardware components within central controller (100). An object request broker (ORB) (230) functions for receiving, aggregating and marshalling service requests from the software application server (210). A transaction server (240) functions for updating investor account and for processing requests from the ORB (230). The system further includes storage (260) for storing trader's accounts (261), market returns (262), market data (263), event data (264), risks (265), trade blotter (266) and contingent claims terms and conditions (267). All market data are received from market data feed (270).

English Abstract:

Methods and systems for conducting demand-based trading are described. In one embodiment, states are established, each state corresponding to at least one possible outcome of an event (264) of economic significance. An investment amount may be determined as a function of a selected outcome, a desired payout (266), and a total amount invested in the states (264). In another embodiment, an investment amount may be determined as a function of parameters of a financial product. In another embodiment, a payout may be determined as a function of an investment amount, a selected outcome, a total amount invested in the states, and an identification of a state corresponding to an observed outcome (263) of the event.

	US	99157183		19991030

English Abstract:

A system employs a stochastic change-of-coordinates technique to represent parameter sensitivities for inconsistent mathematical models for financial derivatives in a commensurable way (20a, 20b, 20c). This includes the implementation of these calculations and the use of the derived representations in trading (front-office) systems as well as desk-level (10a, 10b) and EWRM systems implemented either on site or over a computer network. The financial instrument valuation engines are enhanced so that they can directly calculate commensurable exposure measures or the financial instrument valuation engine receives native exposures to calculate the commensurable exposure measure (11').

Application	WO	2000US19567		20000724
Priorities	US	99359686		19990723

English Abstract:

An apparatus and method of automatically and anonymously buying and selling positions in fungible properties between subscribers over a network is described, an embodiment of which relates to the buying and selling of securities or contracts where the offer to purchase or sell the property may be conditioned upon factors such as the ability to purchase or sell other property or the actual purchase or sale of other property. The system described includes methods for matching buy and sell orders using other markets to effect the execution of transactions without violating conditions set by the subscriber, and reporting prices to third parties. A communication system (10, 12, 14) is described which allows subscribers to communicate anonymously for the purpose of effecting transactions.

21. **LANGE Jeffrey**

3 East 84th Street, Apt. 3, New York, NY 10028; US; US(Residence); US(Nationality);

(Designated only for: US)

English Abstract:

This invention provides methods and system for trading and investing in groups of demand-based adjustable return contingent claims, and for establishing markets and exchanges for such claims (262, 263, 264, 265). The advantages of the present invention, as applied to the derivative securities and similar financial markets, include increased price transparency, reduced credit risk, improved information aggregation, increased price transparency, reduced settlement or clearing costs, reduced hedging costs, reduced model risk, reduced event risk, increased liquidity

incentives, improved self-consistency, reduced influence by market makers, and increased ability to generate and replicate arbitrary payout distributions. In addition to the trading of derivative securities, the present invention also facilitates the trading of other financial-related contingent claims; non-financial-related contingent claims such as energy, commodity, and weather derivatives; traditional insurance and reinsurance contracts; and contingent claims relating to events which have generally not been readily insurable or hedgeable such as corporate earnings announcements, future semiconductor demand, and changes in technology.

RISK MANAGEMENT AND HEDGING IN FINANCIAL MARKETS (STATIC HEDGE, OIL FUTURES)

Author: XUAN, CHANGNENG

Degree: PH.D.

Year: 1997

Corporate Source/Institution: THE UNIVERSITY OF TEXAS AT AUSTIN (0227)

Source: Volume 5902A of Dissertations Abstracts International.

PAGE 575 . 113 PAGES

This thesis deals with issues on risk management and **hedging** in **financial markets**. It includes three essays. Essay I demonstrated the desirability of vega-hedging as a solution... ..that replicates an up-and-out barrier option when the underlying asset follows a stochastic **volatility model**. Our simulation experiments conclude that static hedges replicate barrier options quite

well if the volatility... ..difficulties exhibited by Metallgesellschaft GmbH, essay III of this work investigates the empirical feasibility of **hedging** illiquid long-dated **futures** contracts with their liquid, shorter-dated counterparts. Using the (one-factor) cost-of-carry model for the valuation of futures contracts, we deliberately implement a theoretically redundant **portfolio** by **hedging**, separately, the underlying commodity spot price, the convenience yield and the term structure of interest... ..strategies tend to overhedge oil futures exposure. We conclude that it is indeed feasible to **hedge** the long-dated **futures** contract with shorter-maturity contracts.

ESSAYS ON OPTIONS AND VOLATILITY

Author: NANDI, SAIKAT

Degree: PH.D.

Year: 1995

Corporate Source/Institution: WASHINGTON UNIVERSITY (0252)

Source: Volume 5611A of Dissertations Abstracts International.

PAGE 4504 . 78 PAGES

...underlying stocks.

The second chapter of the dissertation empirically examines the performance of a stochastic **volatility model** which gives closed form solution for option prices and hedge ratios, in terms of pricing... ..between model and market option prices more than could be achieved by a time varying, **deterministic volatility model**. The stochastic **volatility model** also yields lower variance in a minimum variance hedging setup. However, the magnitude of correlation between the returns of the minimum variance **hedge portfolios** of the two models is low, indicating that these models hedge quite differently.

English Abstract:

Automated hedging of financial instruments can include the automated generation of orders to hedge a financial exposure associated with a first financial instrument. Hedging orders include buy and sell orders to acquire long and short positions in a hedging instrument having a price movement that is correlated with price movements of the first financial instrument (fig. 1). Long and short positions are acquired to offset modeled changes in value of the first financial instrument (fig 3). Successive hedging orders may be generated.

French Abstract:

L'invention concerne un procede informatique destine a la couverture automatique d'instruments financiers, consistant a generer automatiquement des ordres destines a couvrir une exposition financiere liee a un premier instrument financier (pour couvrir un risque lie a la valeur d'une option, par exemple). Ces ordres de couverture comprennent des ordres d'achat et de vente permettant de prendre des positions longues ou courtes sur un instrument couvert dont le cours fluctue en fonction des fluctuations du cours du premier instrument financier. Les positions longues et courtes sont prises de maniere a compenser les changements modelises de la valeur du premier instrument financier. Apres qu'un ordre de couverture initial d'achat ou de vente de titres est complete, au cours d'un echange, d'autres ordres de couverture peuvent etre generes. La fixation des prix et des quantites pour les ordres de couverture suivants peut etre, d'une part, fondee sur des modification specifiques de l'utilisateur portant sur le prix du second instrument financier, et, d'autre part, modifiee automatiquement en reponse a l'evolution des cours du marche par rapport au second instrument financier.

Legal Status Type	Pub. Date	Kind	Text
Publication	20030103	A2	Without international search report and to be republished upon receipt of that report.
Search Rpt	20030912		Late publication of international search report
Republication	20030912	A3	With international search report.
Republication	20030912	A3	Before the expiration of the time limit for amending the claims and to be republished in the event of the receipt of amendments.
Examination	20030912		Request for preliminary examination prior to end of 19th month from priority date
